### Why Choose Sand Mountain Pest?

As a pest control company, we have committed our resources into becoming a genuinely great company for our customers. We have made sure that the technician applying our mole service is knowledgeable about our products and services.

### Our Treatment Process

A mole when tunneling for food.

Once you have decided that you want this service, we will send our technician out to assess the situation. He will then place poison in the tunnels throughout the property. The poison will be placed in increments of six feet.

We carefully selected our current brand of poison because it has little to no secondary poisoning effects. That means that if your pet was to eat a mole that had consumed the poison, your pet won't get sick.

We also offer the use of traps if you want to actually see the results. As is the case more often than not, the traps are less of a humane way to die. Fortunately for the mole, the traps do kill instantly.
